Product Description:

Verbatim's Charge and Screen Share GaN Charger Hub allows you to charge up to 2 devices simultaneously including notebooks, tablets, phones or earbuds via smart detection technology. Smart chips recognise how much power is required for each device and deliver the required amount. Whether it's a smartphone, notebook, or other heavy duty Type C equipment, the USB-PD charger automatically detects the connected device & negotiates the exact amount of power required to charge each device as quickly as possible. This negotiation ensures fast charge without delivering surplus power or damaging the device's circuits. The USB-A port supports charging of devices with lower power requirements such as smartphones and earbuds etc.

Powered by Gallium Nitride (GaN), a next-generation charging technology that replaces silicon, the hub allows higher energy efficiencies & fast charging power delivery in an ultra-compact, lightweight size that makes it extremely portable. The charger's PD 3.0 port enables fast charging up to 60 W & is compatible with a wide range of notebooks, smartphones, tablets and Nintendo Switch etc.

The charger also comes with an inbuilt hub function. You can transfer data from your smartphone or compatible data storage device to your notebook connected to the Type C port while charging. Meanwhile, you can also extend the screen of your notebook, smartphone, tablets and Nintendo Switch etc. The HDMI port turns your charger into a dock for your Nintendo Switch, allowing you to connect a TV or monitor with ease. Alternatively, connect your laptop, Macbook or other Type C enabled devices to an external display without the need for an additional hub or adaptor. To support the hub function, you will need a Type C to Type C cable with a minimum bandwidth of 10Gbps.
